

## **Now available on the PRE Stud Book web site: genetic values of the horses on your stud farm**

Fri, 06/29/2018

Once the PRE Stud Book has published the genetic values for 2018 (**146,833 for conformation and 13,509 for Dressage**), the next step is to provide each breeder with this information through the Private Zone. With this, you may **consult and download** an Excel file with all of the genetic values available for the horses registered on your stud farm, both for Dressage and for Conformation.

By downloading all of this information, it is easier to handle and facilitates its use when designing the mating of breeding stock.
